A randomized multicenter trial (www.thelymphtrial.com) was setup in the Netherlands to uncover the efficacy of lymph surgery. As surgery is a relative new option to treat lymph edema, many clinical questions remain unanswered.

This online meeting tries to open the dialogue with established faculty on clinical success and challenges and identification of research topics.

It follows the top 10 research questions launched in 2019 by the Dutch plastic surgical society. The list was created using a multidisciplinary election process with specialists, patient advocacy groups and other stakeholders. One out of ten items is the surgical treatment of lymphedema.

Faculty:

Wei Chen, MD, FACS,
Clinical professor in Plastic Surgery
Cleveland Clinics in Ohio. Specialized in Head, regional microsurgery & super microsurgery. Co-director of the center for lymphedema research & reconstruction.

Hanneke Tielemans, MD,
Plastic surgeon at Radboud University,
the Netherlands, specialized in reconstructive micro(lymphatic) surgery.

Joost Wolfs, coordinating investigator The LYMPH TRIAL (thelymphtrial.com)
Webinar: **Current surgical treatment of lymph edema & research**

With (inter)national faculty: Prof. Chen (Cleveland, Ohio), dr. Tielemans (Radboud MC), dr. Wolfs, coordinating investigator of www.thelymphtrial.com

May 6th

16:00 PM (AMS)
10:00 AM (Ohio, USA)
